Permitting for Clean Energy Generators (e.g. solar, wind):

Permitting process varies based on size and location of the installation:

- Projects < 25 MW: Permitted at **local level** (SEQR, municipal requirements)
- Projects > 25 MW: Permitted at **state level** (Article 10, Office of Renewable Energy Siting [ORES])
- Projects between 20 – 25 MW: ***May opt-in*** to State-level siting process through ORES

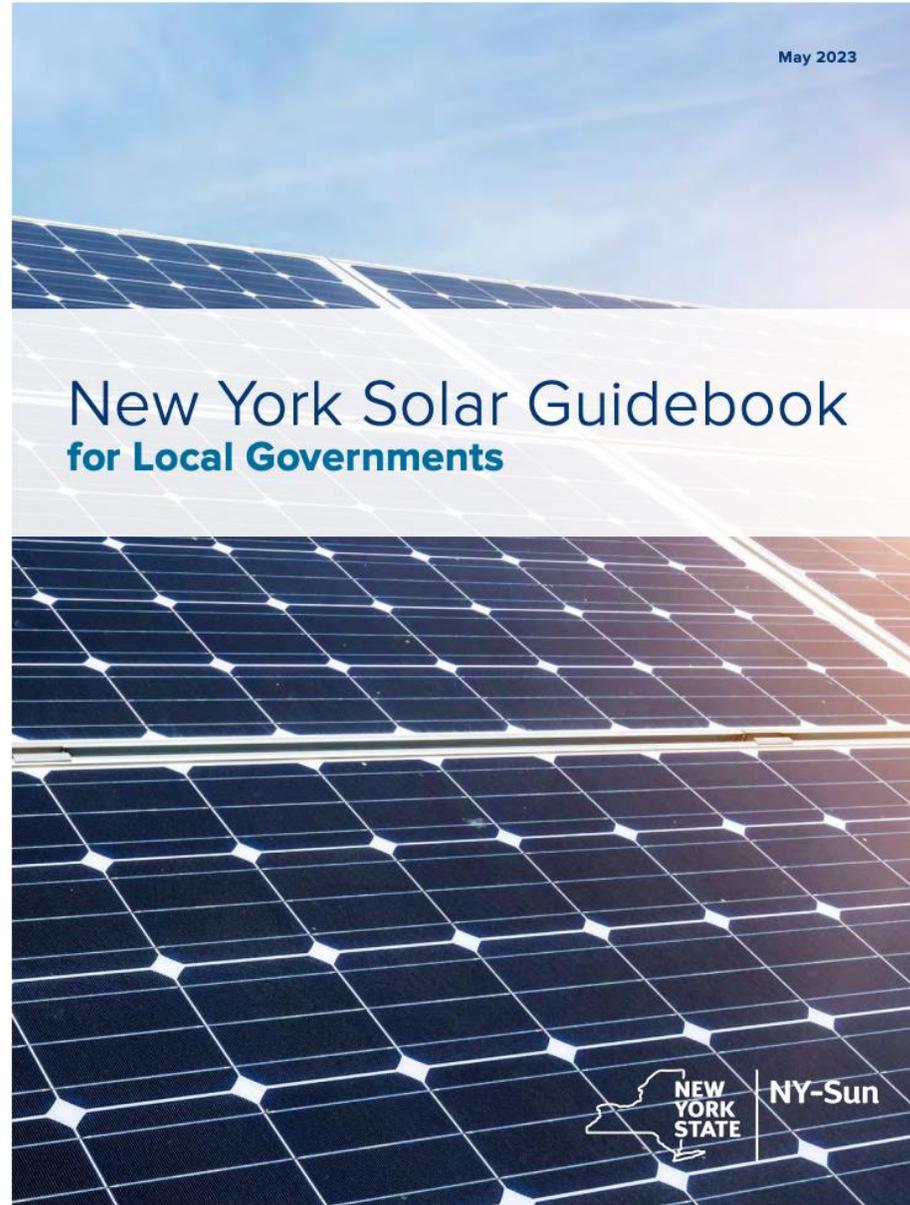

Primary Land Use/ Local Considerations:

- Interconnection
- Appropriate location/zoning
- Bulk/area standards
- Environmental impacts
- Fire safety
- Incident management training
- Visual/aesthetic impacts
- Agricultural land impacts
- Decommissioning
- Taxation
- Noise

Model Solar Law Updates

Template ordinance has been revisited and updated multiple times; recent updates include:

- Narrative discussion of regulatory tool options for solar (floating, overlay, traditional zoning)
- **Delineation between community solar-scale and “utility-scale” projects**
- **Modifications to mitigate impacts on agricultural lands, encourage co-location of solar and farm operations**
- Additional setback requirements
- Improved alignment with state-level permitting process

Model Solar Law Contents

System Energy System Classifications

- **Tier 1 Solar Energy System:**
 - > Roof-Mounted
 - > Building-Integrated
 - > Ground Mounted – Nameplate capacity up to 25 kW AC or panel surface area up to 4,000 sq ft
 - > On-Farm Solar Systems
- **Tier 2 Solar Energy System:** Ground-Mounted systems not included in Tier 1 with a nameplate capacity up to [1] MW AC OR facility area up to [8] acres and generates no more than 110% of the energy used on this site.
- **Tier 3 Solar Energy System:** Ground-Mounted systems not included in Tier 1 or 2 with a nameplate capacity up to [5] MW AC OR facility area of up to [40] acres.
- **Tier 4 Solar Energy System:** Not included under Tier 1, Tier 2 of Tier 3 Solar Energy System.
 - > Categorically includes any project subject to the state level ORES permitting process.

Solar Energy Projects by Tiers

Tier 1

Tier 2

Solar Energy Projects by Tiers

Tier 3

Tier 4

Permitting Solar Energy Projects

- Important to base solar planning decisions on feasibility and priorities – utilize Utility Hosting Capacity maps, transmission line maps, zoning map, soil maps, etc.
 - Model Law permitting methodology:
 - > Tier 1: permitted in all districts
 - > Tier 2: permitted in all districts as accessory structures
 - > Tier 3 and Tier 4: permitted in ___ districts using **Special Use Permit, Site Plan Review**
- } Building Permit; NYS Unified Solar Permit

PERMIT APPLICATION

NY State Unified Solar Permit

Unified solar permitting is available statewide for eligible solar photovoltaic (PV) installations. Municipal authorities that adopt the unified permit streamline their process while providing consistent and thorough review of solar PV permitting applications and installations. Upon approval of this application and supporting documentation, the authority having jurisdiction (AHJ) will issue a building and/or electrical permit for the solar PV installation described herein.

PROJECT ELIGIBILITY FOR UNIFIED PERMITTING PROCESS

By submitting this application, the applicant attests that the proposed project meets the established eligibility criteria for the unified permitting process (subject to verification by the AHJ). The proposed solar PV system installation:

- | | | |
|------------------------------|-----------------------------|---|
| <input type="checkbox"/> Yes | <input type="checkbox"/> No | 1. Has a rated DC capacity of 25 kW or less. |
| <input type="checkbox"/> Yes | <input type="checkbox"/> No | 2. Is not subject to review by an Architectural or Historical Review Board. (If review has already been issued answer YES and attach a copy) |
| <input type="checkbox"/> Yes | <input type="checkbox"/> No | 3. Does not need a zoning variance or special use permit. (If variance or permit has already been issued answer YES and attach a copy) |
| <input type="checkbox"/> Yes | <input type="checkbox"/> No | 4. Is mounted on a permitted roof structure, on a legal accessory structure, or ground mounted on the applicant's property. If on a legal accessory structure, a diagram showing existing electrical connection to structure is attached. |
| <input type="checkbox"/> Yes | <input type="checkbox"/> No | 5. The Solar Installation Contractor complies with all licensing and other requirements of the jurisdiction and the State. |
| <input type="checkbox"/> Yes | <input type="checkbox"/> No | 6. If the structure is a sloped roof, solar panels are mounted parallel to the roof surface. |

For solar PV systems not meeting these eligibility criteria, the applicant is not eligible for the Unified Solar Permit and must submit conventional permit applications. Permit applications may be downloaded here: [BUILDING DEPARTMENT WEBSITE] or obtained in person at [BUILDING DEPARTMENT ADDRESS] during business hours [INDICATE BUSINESS HOURS].

Section 8: Tier 3 Systems Permitting Requirements

Process for Approval

- Choose which zoning district(s) to permit systems.
- Applications shall be reviewed for completeness within 10 business days.
- Applications shall be subject to a public hearing and a notice shall be published in the official newspapers 5 days in advance.
- Referred to the [County Planning Department] pursuant to General Municipal Law § 239-m as required.
- Upon closing the public hearing, the reviewing board shall have 62 days to take action on the application. The 62-day period may be extended.

Requirements for Approval

1. **Site Plan Application**
 2. **Special Use Permit Standards**
 1. Underground Requirements
 2. Vehicular Paths
 3. Signage
 4. Glare
 5. Lighting
 6. Multiple Lots
 7. Lot Size
 8. **Setbacks**
 9. Height
 10. Lot Coverage
 11. **Fencing Requirements**
 12. **Screening and Visibility**
 13. **Environmental Resources**
 14. **Agricultural Resources**
3. Ownership Changes

Section 9: Tier 4 Systems Permitting Requirements

Process & Requirements for Approval

Choose which zoning district(s) to permit systems.

Subject to Site Plan and Special Use permit Requirements established for **Tier 3 Systems**.

Applications shall be reviewed for completeness within 60 business days.

Applicants must conduct a **Pre-Application Meeting** with the Reviewing Board.

Applications must include a **Community Engagement Plan**.

Additional Special Use Permit Standards.

Decommissioning Requirements

B.13. Decommissioning Plan

- Signed by the owner and /or operator of the solar system and submitted by the applicant.
 - States the time required to remove the system and ancillary structures.
 - States time required to repair property damage caused by installation/removal
 - States the cost of decommissioning and removal of the system and necessary remediation or restoration.
- Requires a decommissioning financial surety to ensure system removal and site restoration at the end of a project's useful life (or other condition which may trigger decommissioning).
 - The amount shall be [115]% of the cost of removal and site restoration, and shall be revisited every [5] years and updated as needed to reflect any changes.

Setback Requirements

Tier 3 Setback options:

- Subject to the setback requirement of the underlying zoning district.
- Follow the suggested setback requirement for each zoning district.

Tier 4 Setback options:

- Carries over Tier 3 setback approaches, with added layer of setback to non-participating occupied residences.

Zoning District	Front	Side	Rear	Non-Participating Occupied Residence
Residential Low Density	100'	100'	100'	250'
Residential High Density	--	--	--	--
Commercial / Business	30'	15'	25'	250'
Light Industrial	30'	15'	25'	250'
Heavy Industrial	30'	15'	25'	250'
Agricultural / Residential	30'	15'	25'	250'

Special Use Permit Standards: Agricultural Resource Requirements

Tier 3 and Tier 4 systems:

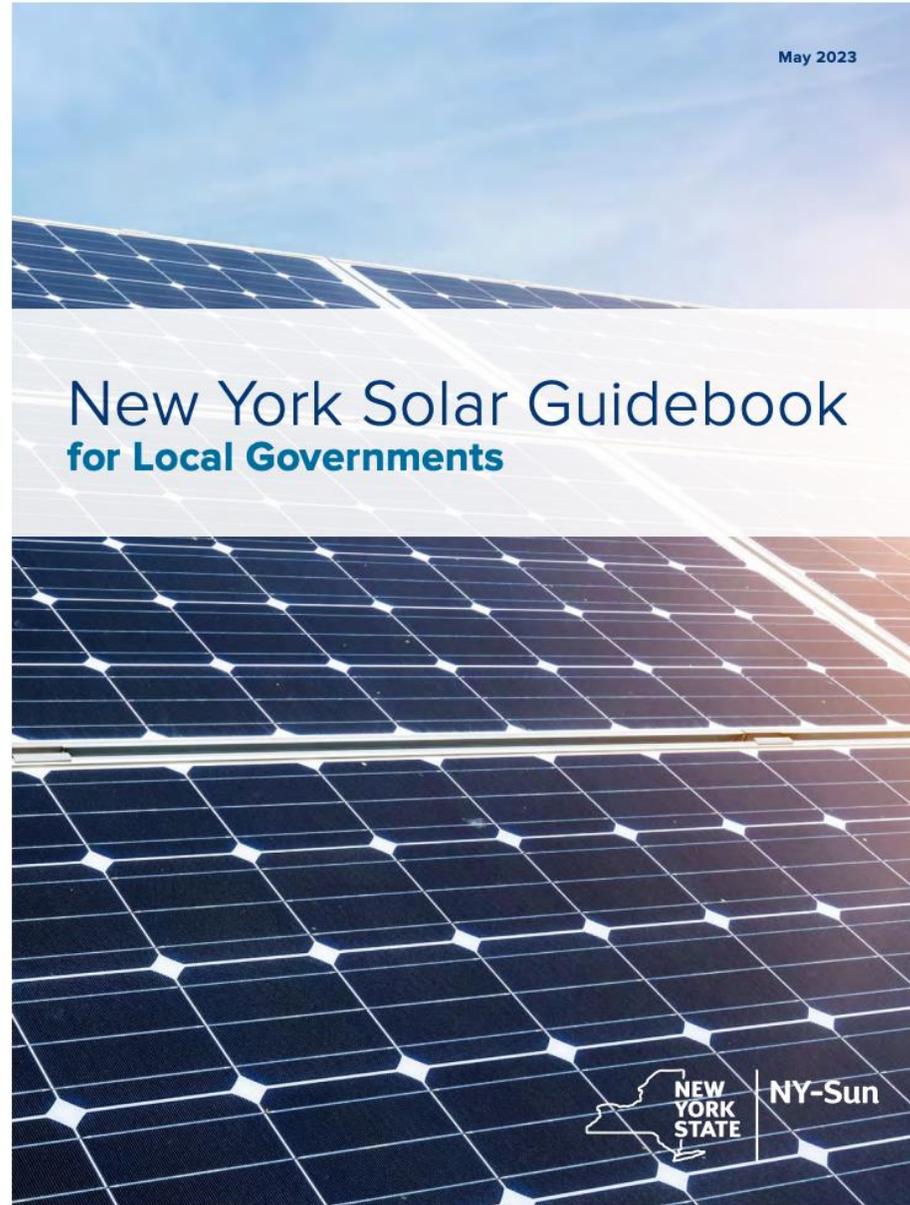

- System components shall occupy no more than [50]% of the **Mineral Soil Groups (MSG) 1-4 area**
 - May exceed the [50]% threshold if it incorporates onsite Farm Operation
 - Review Board may exempt portions if MSG 1-4 land is not viable for agricultural production
- Decommissioned according to NYS Department of Agriculture and Markets guidelines

Additional requirements for Tier 4 :

- Tier 4 System components, equipment, and associated impervious surfaces shall not occupy more than [50%] of the **Active Agricultural Lands** within the Facility Area
 - Exceedance of [50%] threshold may be allowed based on the **Reviewing Board's** determination that the land is being used for a Farm Operation
- Require full adherence to NYSAGM Guidelines

Nearly 3,000 New York farms closed in 5 years, underlining industry issues

by Dale Ostrander | Tue, March 5th 2024 at 6:31 PM 

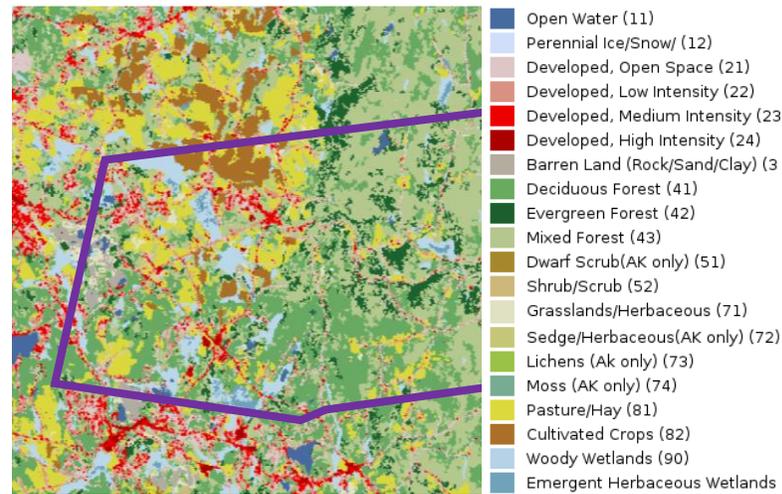

The video thumbnail shows a large wooden sign for Scipio Springs Dairy. The sign features a cow illustration and the text "SCIPIO SPRINGS DAIRY", "EST. 1882", and "In the Heart of Cayuga County". A smaller sign to the right displays the "CM" logo. A play button is overlaid on the center of the image.

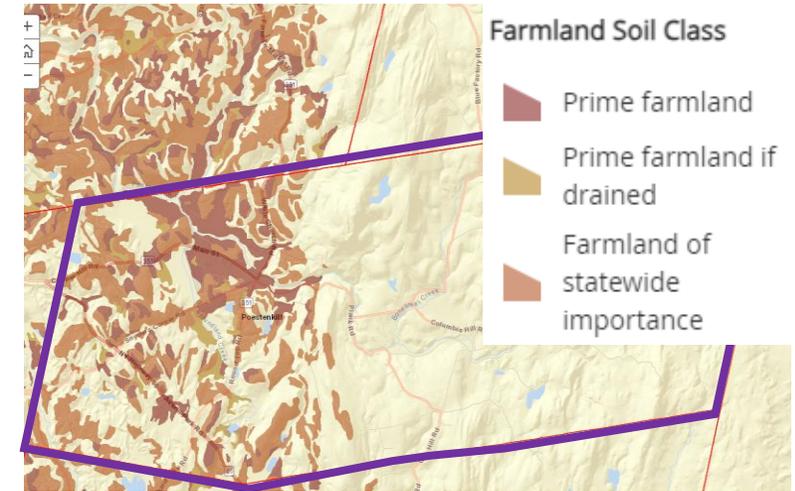

Protecting Agricultural Resources

Mineral Soil Groups were established to create a uniform statewide land classification system based on the differences in soil productivity and capability. **MSG 1-4** are recognized highly productive soils based on their combination of physical and chemical properties.

Active Agricultural Land: used for a Farm Operation in accordance with Agriculture and Markets Law § 301 – uses of which include production of crops, livestock, and livestock products – within the past 5 years.

Prime Farmland soils have the combination of physical & chemical characteristics for producing food, fiber, and/or other crops.

Farmland of Statewide Importance: do not meet the criteria for Prime Farmland or Prime Farmland if Drained, but are classified as mineral soils in priority land capability classes.

Promoting Co-Location: Agrivoltaics

Key benefits of dual-use solar approaches may include:

- Collaboration between solar developers, local farms, and agricultural organizations that benefits all parties
- Improvements in soil health and water retention
- Farmland preservation, viability, and intergenerational transfer
- Investments in farm infrastructure and equipment
- Land use optimization and integrated farm management
- Opportunities for research on land management and agronomic practices

Can Solar Development and Agriculture Work Together?

Onondaga County Planning Federation
35th Annual Planning Symposium
March 13, 2024

Who Has Heard of American Farmland Trust?

Saving the Land that Sustains Us

American Farmland Trust

- Nonprofit Organization founded in 1980
Committed to Saving America's Farmland
 - Protecting Farmland From Development
 - Promoting Sound Farming Practices
 - Keeping Farmers on the Land
- Work From Kitchen Table to Congress

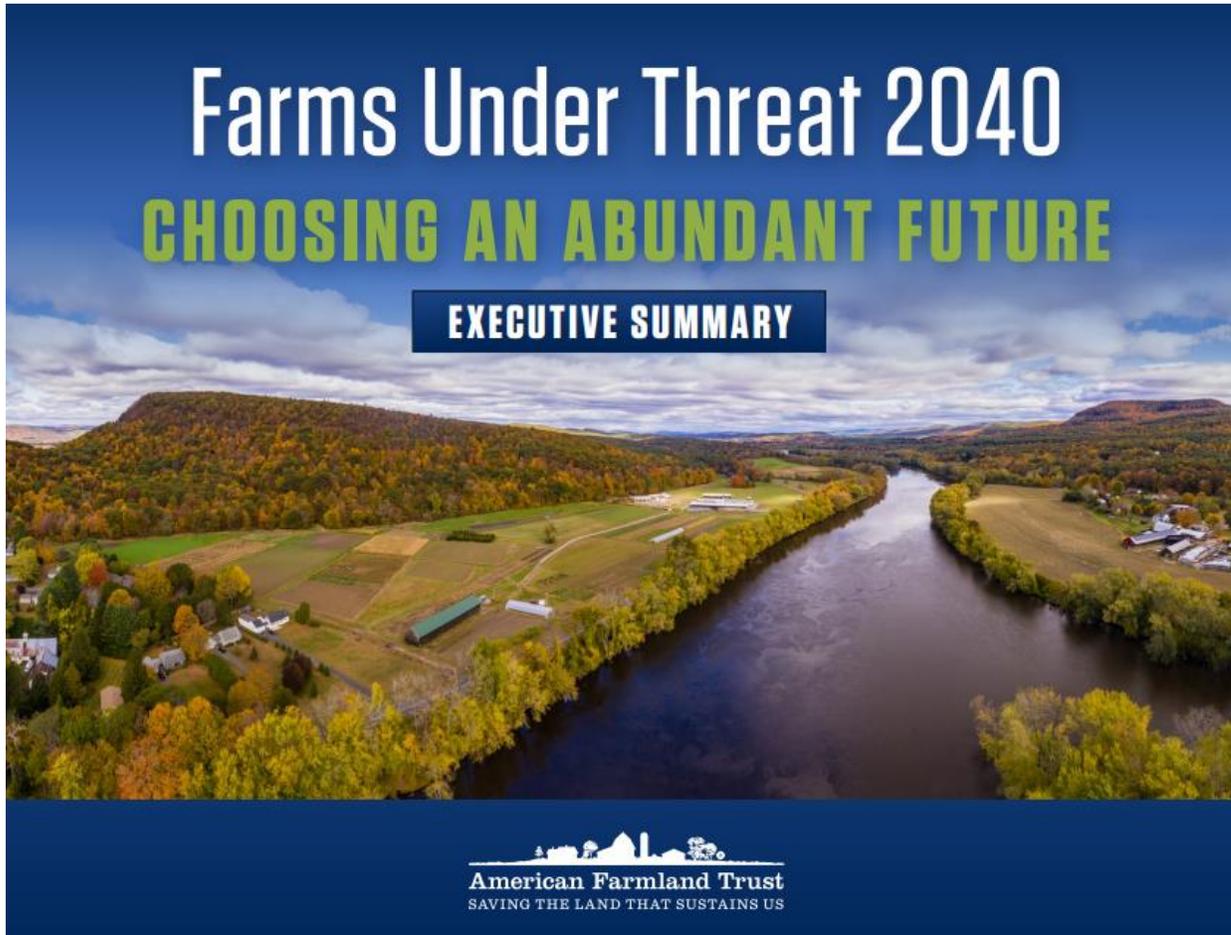

NY agriculture is a major economic driver. It also faces increasing pressures from many directions

New York is a leading agricultural state, worth \$5.75 billion in revenue 2017.

According to the USDA 2022 Ag Census, there are:

- 30,650 farms in New York State and 6,502,286 acres in production.
- New York farms employ 55,363 people. Dairy and milk production accounts for nearly 26,000 jobs in NYS
- Grain and oilseed farming employs nearly 15,500.
- Veggie and melon farming is responsible for 7,750 jobs.
- All sectors of agriculture, including processing, are responsible for nearly 200,000 jobs in NYS.

Challenges to farm viability (development)

Development Threatens New York's Agricultural Land [does not include solar projections]

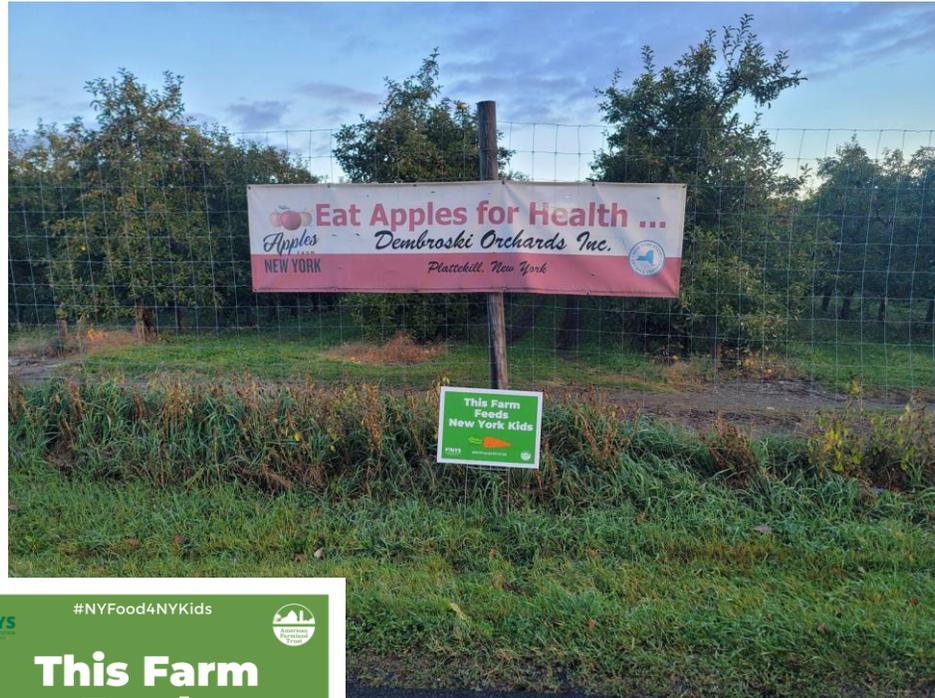

From 2001-2016, 253,500 acres of New York's agricultural land was developed or compromised.

Projected from 2016-2040, an additional 452,000 acres paved over, fragmented, or converted |

121,000 acres of New York's best land were converted to development

28,300 acres of New York's Nationally Significant land were converted.

Challenges to farm viability (markets, farm transitions)

The NY farmer population is aging, with 1/3 of farmers aged 65 or older, and 90 percent of them without a known successor

Challenges to farm viability (weather)

<https://wyrk.com/apple-orchards-crop-losses-ny/>

New York's dairy farmers are also battling the impact of climate change

Assemblywoman Carrie Woerner says one of the biggest issues is that farming is getting more expensive, but the revenue isn't rising to match the cost.

<https://spectrumlocalnews.com/nys/central-ny/in-focus/2022/08/06/in-focus--dairy-farmers>

Challenges to farm viability (solar)

New York Annual Solar Installations

New York Climate Leadership & Community Protection Act - 60 GW of Utility Solar

2023: 4.7 GW

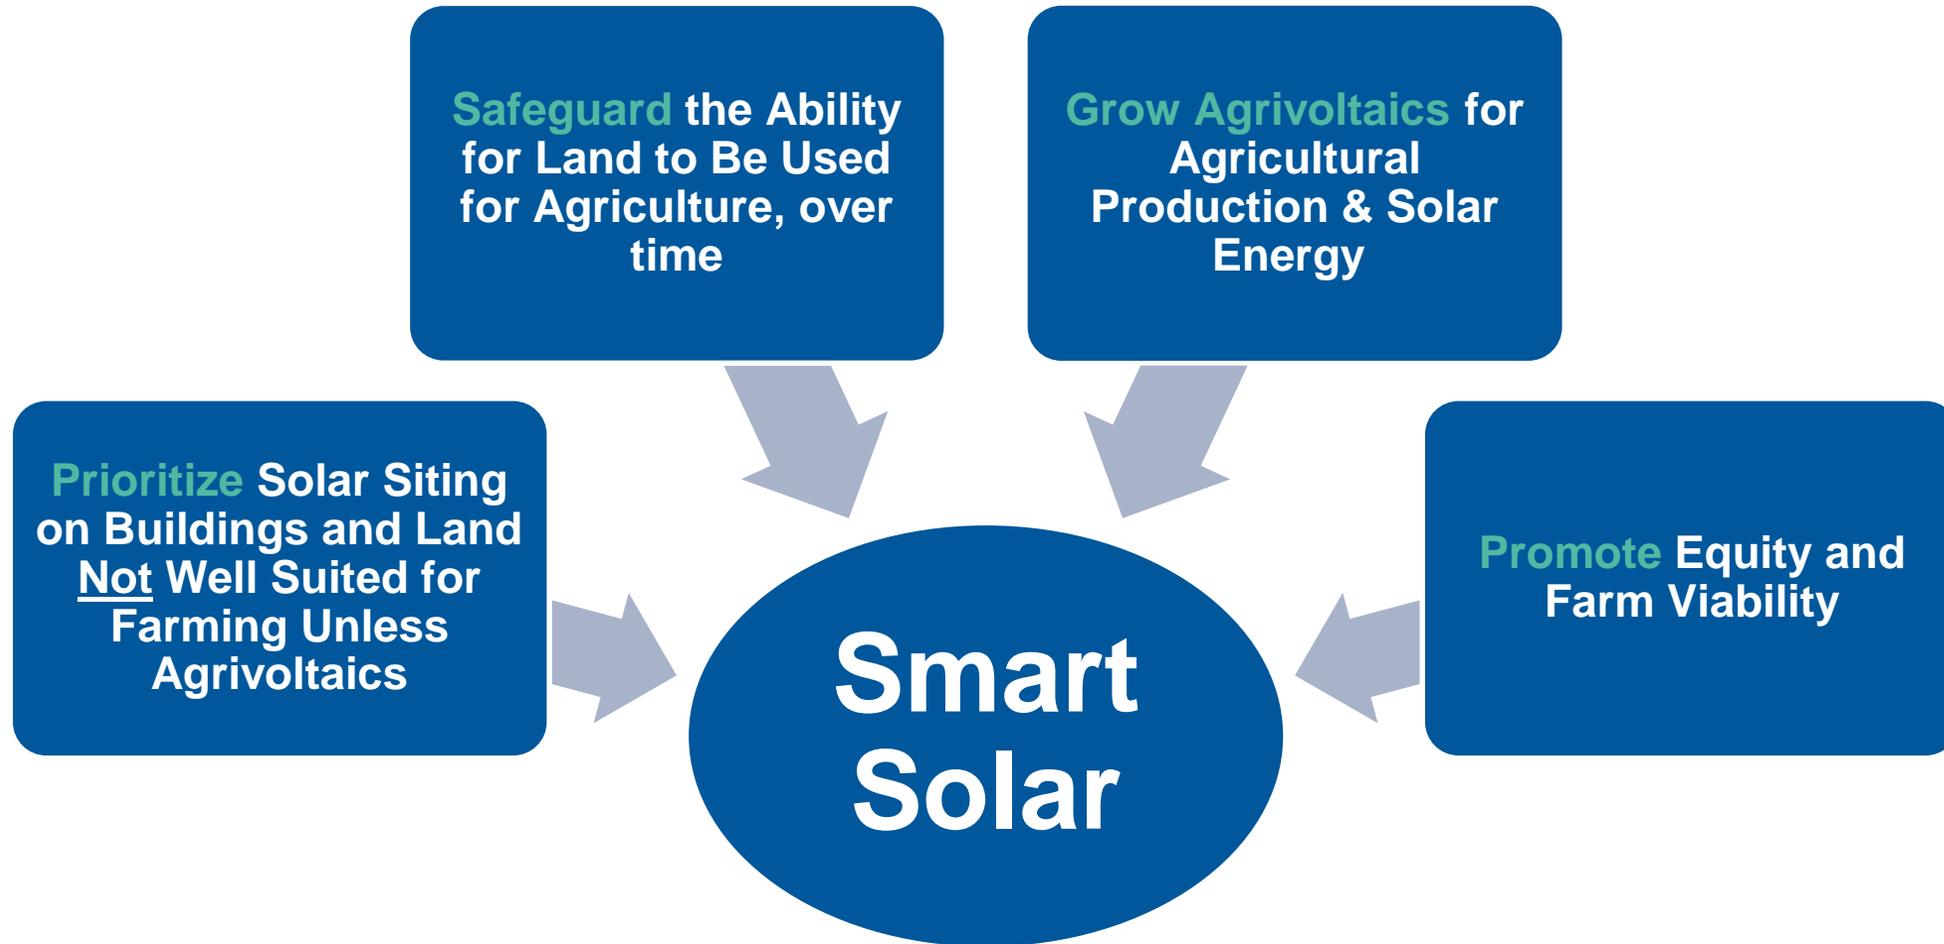

5 Year Projection: +8.8 GW

2050 estimate:

300,000-600,000 acres

AFT Smart Solar Principles

What is Agrivoltaics?

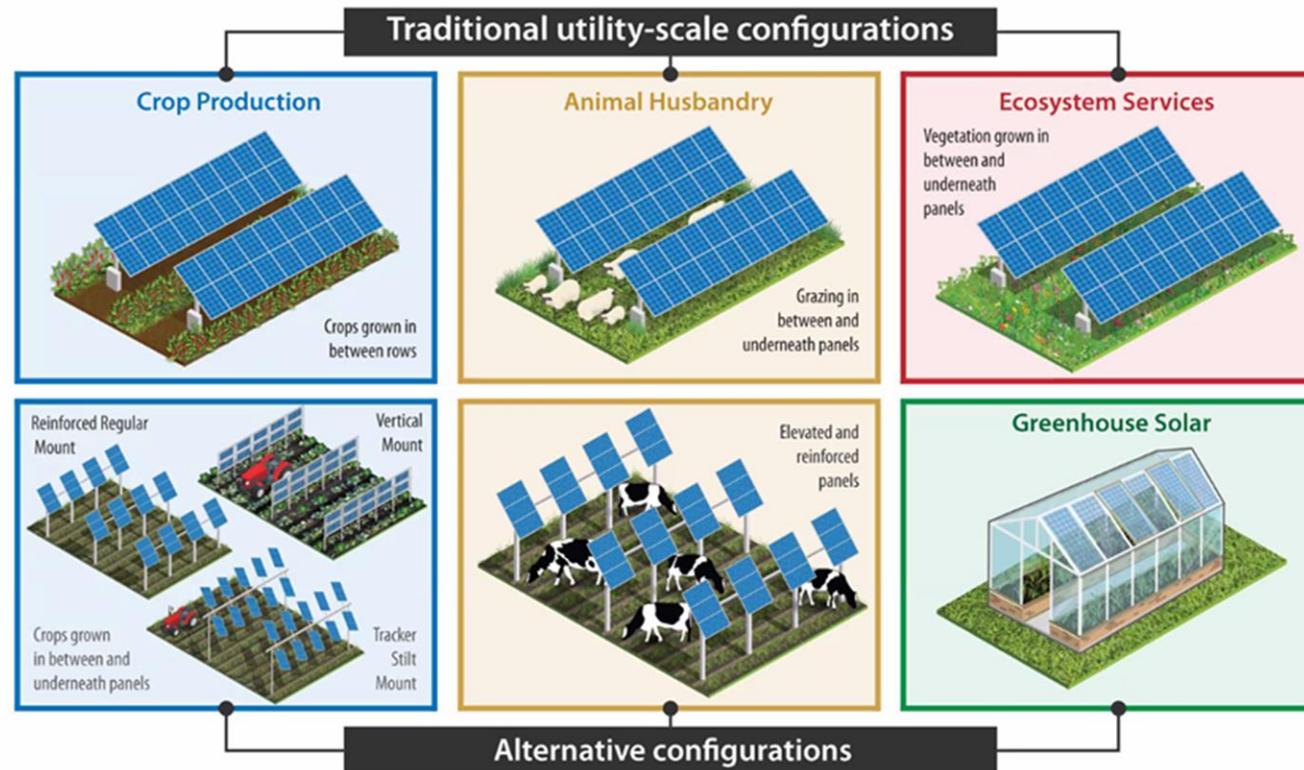

NYSERDA/NYSDAM: The simultaneous use of land for solar photovoltaic power generation and agricultural production of “crops, livestock and livestock products,” as defined by NYS Agriculture and Markets Law (AML) Sec 310(2).

Pollinator habitat by itself is not “agrivoltaics” per NYS Ag and Markets Law

Farmer First

Agrivoltaics projects sustain agricultural production underneath solar panels and/or between rows of solar panels throughout the life of the project.

Farmer-First Solar

Intentionally Designed for:

- Farm viability, flexibility over time
- Improve soil health, water management
- Crop and production diversity
- Balancing production of power with farm products

Could allow for different ownership models, lease payments

Can be installed at different scales (generally smaller scale at this point but that could change with NYSERDA incentives)

Farmers and communities can help take the lead and seek solar that works for farmers and farmland.

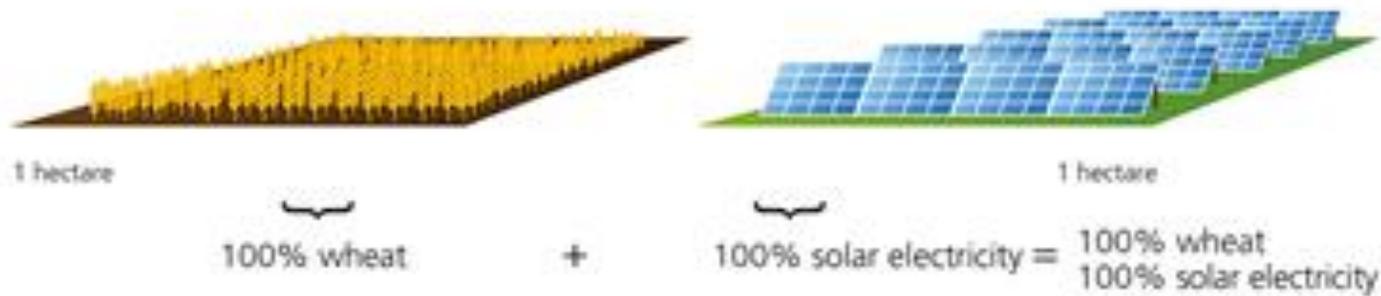

PHOEBUS FUND, LLC.

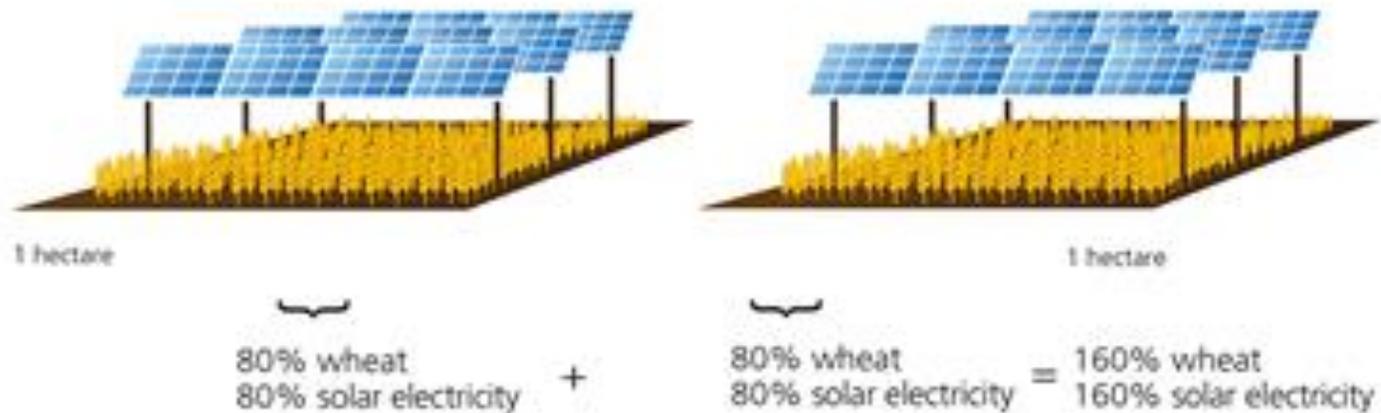

Solar Designs Matter

Separate Land Use on 2 Hectare Cropland

Combined Land Use on 2 Hectare Cropland: Efficiency increases over 60%

Concept:

Research is showing that agrivoltaics can allow for land to generate more revenue with a combined crop of plants and energy.

Somewhat less energy produced.

Somewhat less crop produced.

Total “crop” greater than either of the two crops (solar or food).

Communities Can Plan for Solar and Agriculture

- The concept needs to be socialized – change our way of thinking so at the minimum it is an option on the table.
- Not either solar or agriculture, but solar and agriculture
- Incorporate agrivoltaics into solar laws – ORES looks at local laws and is not seeing agrivoltaics
- Incentivizing at a state and local level – NY considering a pilot agrivoltaics research project to determine how much additional funds per megawatt (adder) would work to incentivize developers

NYSERDA Model Solar Law

Some Unintended Consequences of Local Laws

Hyperion, LLC

- Height requirements may prevent agrivoltaics
- Buffers/setbacks may reduce amount of Solar, make project impossible
- Raised panels may not need fencing
- By requiring it stays off good farmland may reduce farm viability
- Making laws too restrictive – considered unreasonable and are discounted

What are Other States Doing?

Carrots - Dual Use / Agrivoltaics Incentives

Agrivoltaic Research and Demonstration:

Colorado, New Jersey, Washington

Incentives/Adders:

Massachusetts, New Jersey

Agrivoltaics to Reduce Mitigation Requirements:

New York, Maine

Farmland Assessment or Property Tax Benefit for Agrivoltaics:

Massachusetts, New Jersey, Michigan

States considering policy:

California, Virginia, Connecticut, New York
